**Introduction - Objective**

Hyperthermia is the key to the biological treatment of cancer caused by local lesions. Hyperthermia is often combined with other treatments. The combination of hyperthermia with other medical treatments is the most effective in reducing the tumor mass. The main objective of this study was to investigate the potential of oncothermia in conjunction with traditional Chinese medicine (TCM). The study aimed to evaluate the synergistic effects of oncothermia and TCM on the reduction of cancer cell proliferation and in vitro cell death. The results indicated a significant reduction in cell viability and proliferation in the combination group compared to the control group. The study demonstrated that the combination of oncothermia and TCM has a synergistic effect on the treatment of cancer.

**Method**

The study involved two groups: the control group and the combination group. The control group received only oncothermia treatment, while the combination group received oncothermia treatment in conjunction with traditional Chinese medicine. The study evaluated the effects of the treatment on cell viability and proliferation. The results indicated a significant reduction in cell viability and proliferation in the combination group compared to the control group. The study demonstrated that the combination of oncothermia and TCM has a synergistic effect on the treatment of cancer.

**Synergy of the methods**

In the combination group, the results indicated a significant reduction in cell viability and proliferation compared to the control group. The study demonstrated that the combination of oncothermia and TCM has a synergistic effect on the treatment of cancer.

**Conclusion**

The study demonstrated that the combination of oncothermia and TCM has a synergistic effect on the treatment of cancer. The results indicated a significant reduction in cell viability and proliferation in the combination group compared to the control group. The study demonstrated that the combination of oncothermia and TCM has a synergistic effect on the treatment of cancer.
